Project Design Phase I
Solution Architecture

Date	29 OCTOBER 2022
Team ID	PNT2022TMID51006
Project Name	Personal Expense Tracker Application

Solution Architecture:

Solution architecture is a complex process – with many sub-processes- that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases and solution requirements
- Provide specifications according to which the solution is defined, managed, and delivered.
